Skills

Front-End : JavaScript ♦ React Js ♦ HTML ♦ CSS
Framework : Tailwind css ♦ Daisy UI ♦ Bootstrap
Back-End : Node Js ♦ Express Js ♦ MongoDB

Projects

MGI : Inventory Management

- My project is inventory management related, so in this projects I have created functionality that allows all users and admin to log into their own separate dashboard using Node js.
- In this project I have create section with Material UI on home page & Testimonial so that all users can give their comments about the project.
- I have create search functionality in Dashboard Sales Collection section using JavaScript and Used AOS animation to increase the attractiveness of the UI.

BBH Library : Library Management

- This project of mine is about Library Management. I used Axios to load the books in project and displayed the books with React components.
- I want registered users on my website to be able add new books, so I created an api on the Server side with Node js and used React Rating on the frontend.
- I have used JSON web Token in Backend to keep all important API information secure on my this website. Because the security of my user's information is the main principle of my website.

Toucan : Retail E-Commerce

- My project is about Retail E-commerce. My project has many brands and they are dynamic and I'm using JavaScript Es6 to separate all the brand products.
- I have used Tailwind css for frontend UI design in this project and also used Daisy UI. And I also Responsive for all devices with Tailwind css.
- So that all users can give their opinion, I have create Active Feedback section and used Node js to store the opinions in the Backend. Used marquees to showcase our sponsors.
